Subject: Enercon Steam Systems Condensate Removal

Dear John:

Relaying some information regarding the recent installation of the Enercon Condensate Removal System, we have been able to do the following:

- **Reduce our plant steam pressure setting from 110 psig to 95 psig.**
- **The average steam load has been reduced by five to seven thousand pounds/hour due to better heating in cooking vessels. The estimated savings are \$150,000/year.**
- **The cooking processes have shown improvements with better temperature control and quicker cook times. This has improved throughput and product quality.**
- **We no longer have to service the traps. The older system was a constant maintenance area.**

Based on our good experience, we have informed our other sister companies to investigate the Enercon System.

**Sincerely,
The Carriage House Companies, Inc.**

Troy J. Winkelman
